

## Know and Rate your Cyber Health Posture.

Today, your IT infrastructure not only supports your corporate needs but also your entire ecosystem of business partners and customers, thereby increasing your exposure to cyber risks. This heightens the need to measure, monitor and maintain your cyber health to guard against potential risks from all fronts. Singtel's Cyber Posture Rating and Benchmarking Programme (CPRB) offers a quantitative, non-intrusive measurement of your outside-in security posture, continuous visibility on your security performance, and actionable recommendations to protect your IT infrastructure against all attacks.

# Cyber Posture Rating and Benchmarking

## How is your Cyber Posture being Rated?

Singtel Cyber Posture Rating and Benchmarking Programme (CPRB) rates your organisation's security performance using high quality, externally observable information on security events such as botnet infections, spam propagation and

malware infections, amongst others. It also looks at how your organisation exercises due diligence in ensuring your public-facing assets such as SPF domains, DKIM records, TLS/SSL certificates and the likes are securely configured.

This allows your organisation to quantify cyber risk, measure the success of your overall security programme, and benchmark your performance against industry peers.

## Outside-in Approach Leveraging Terabytes of Global Data

- Companies are rated on a scale of 250-900 - high rating indicates strong security performance and low security risks.
- Analyses, rates, and monitors companies' security performance, all from the outside.
- Daily ratings and alerts via the Service Portal provide continuous visibility.

## Assess the Cyber Risk of Third Party Vendors

CPRB allows an organisation to assess security risks pertaining to outsourcing by providing a quantifiable measurement of your third party vendors' security posture.

- Cyber Posture Ratings for third party management enables organisations to identify, quantify and mitigate the risk associated with sharing sensitive data with business partners.
- This automated service analyses, rates and monitors the security performance of third parties daily, all from the outside of the company.
