

Let's make everyday better

DON'T LET YOUR BUSINESS FALL VICTIM.  
**PROTECT AGAINST  
MOBILE THREATS NOW.**

Singtel Mobile Security

Let's make everyday better

## YOUR MOBILE PHONE, YOUR LIFE.

Every day, we do new things with our mobile phones. We download new apps, check emails, perform mobile banking and browse websites. While these experiences are great, we can never really be sure if we are leaving our company and personal information open to unwanted security threats, especially when we log on to unsecured WiFi hotspots. Which is why protecting your mobile is now more important than ever.

## WHAT IS ZONEALARM?

ZoneAlarm is a mobile security app that protects smartphones against infectious viruses from apps and unprotected WiFi access points that can compromise your privacy.

At less than \$0.10/day, this enterprise-grade security app offers you the same level of stringent security used by companies around the world. It protects both iOS and Android phones at several levels, from the point of accessing any WiFi network to using an app. ZoneAlarm is active at every step of your mobile journey so you can have peace of mind.

## Features

### App Protection

Scans and alerts on risky apps that download other malicious software and compromise company and personal information, even before you access them.\*

### WiFi Protection

Hotspots are ranked according to factors such as whether or not they are encrypted and how frequent their passwords are changed. This identification helps to protect your privacy by ensuring the hotspots you connect to are the most secure.

### Constant Security

New malware and threats are constantly updated in the database to protect your operating system from possible attacks at all times:

\*For Android phones only

An app to keep your mobile activities safe.  
Brought to you by Singtel.

**ZONEALARM**  
By Check Point

**\$2.90/mth**
