

Expert wiring solutions for your home's broadband network

Structured cabling around your house should be set up to extend the wired connection from the router to your rooms, connected to data point sockets installed on the walls.

How do I plan and install my home network cabling

You will need to plan the possible data points needed around your house so that the cables can be run more efficiently.

- Plan and lay the cables (minimum Cat5e Ethernet cables) along the ceiling edges of your house.
- Estimate the number of data points required in each room.
- Construct these data points at the required location of the room (behind the television or the game console)

If you are renovating your house, it is a great opportunity to engage our certified contractors to perform structured cabling within your home. You can choose to install concealed wiring, or through surface trunking as a cheaper alternative.

You can select one of the wiring options below to enjoy fast and reliable wired connections at your subscribed speed

Surface trunking below the height of 3 meters

On the day of installation, our attending installer will perform a surface trunking installation if there needed, subject to your consent. Surface trunking from the router to the first Singtel TV set-top box is free. Surfacing trunking from the router to other locations will be \$81 (inclusive of GST) for the first 35 meters and \$10.09 (inclusive of GST) for every subsequent 5 meters.

Face plate conversions

If your socket plate only has a phone port, and structured cabling has already been installed at your home using at least a Cat5e Ethernet cable, you can convert the socket plate from a phone port to a data port.

Certified contractors for other wiring needs (Concealed wiring, wiring at height, data point installations)

In our pursuit to provide seamless customer support, Singtel has trained and accredited selected contractors to handle special tools and perform extensive in-house wiring jobs. Our wiring services include:

- Concealed wiring,
- Data point installation, or
- Wiring installations at a height of more than 3 meters from the floor

You can contact our certified partners for a site survey, quotation and wiring installation services. Liaising, communication and execution responsibilities are between you and the certified contractor.
